Instructions: Watch the film clip(s) for your case study patient and collaborate with your group members to respond to the following questions. (Note: If you need more space you may write your responses on the back of this page or on a separate sheet of paper.)

1. What are the most common emotional challenges that the patients are facing?

2. What are some similarities in the coping strategies and support systems that the patients are using?

3. What common benefits do music and art provide for the patients?

4. Merriam-Webster Dictionary defines dignity as “the quality or state of being worthy of honor and respect.” How does the palliative care at the hospice reinforce the dignity of the patients who are being treated there? Give examples from the film for each patient to support your response.
